

Using NLS-systems one may find out that microscopic amount of some chemical elements, such as gold for example, is also important for preserving of good health condition. Many others microelements participate in functioning of vibratory and bio-electronic systems of human organism and his CNS.

Studies of Doctor Edgar Cayce have proven that gold deficiency in human organism should be regarded as an important etiologic factor of multilocular sclerosis development, endocrine glands imbalance and nerve system dysfunction.

Poor balance of food ration results not only in deficiency of vitamins and minerals, but also microelements, such as gold, silver, iodine, selenium.

Unfortunately their importance for optimal functioning of healthy organism is not recognized by orthodox medicine yet.
